

Project: Provo Municipal Airport Development

Recipient: City of Provo

Location: Provo, Utah

Purpose: The Provo Municipal Airport Development project will create a new aircraft parking and staging ramp to accommodate heavier aircraft and allow them to remain stationary for longer durations of time. The current aircraft parking is inadequate for the current demand, as a result of the Provo Airport being designated as a reliever airport for all of the major airlines operating from the Salt Lake International Airport. The project will entail the construction of more than 400,000 sq. ft. of aircraft parking stressed for larger aircraft. By creating this parking area for larger heavy aircraft, additional space for diverted aircraft at the airport becomes more accessible.

Amount: \$6,000,000
